**Question 1** | Correct Mark 1.00 out of 1.00

Given an array of N integer, we have to maximize the sum of arr[i] * i, where i is the index of the element (i = 0, 1, 2, ..., N).Write an algorithm based on Greedy technique with a Complexity O(nlogn).

Input Format:

First line specifies the number of elements-n

The next n lines contain the array elements.

Output Format:

Maximum Array Sum to be printed.

Sample Input:

5

2 5 3 4 0

Sample output:

40

**Answer:** (penalty regime: 0 %)

```c
#include <stdio.h>
#include <stdlib.h>

int compare(const void *a, const void *b)
{
    int x = *(int *)a;
    int y = *(int *)b;

    return x - y;
}

int main()
{
    int n;
    scanf("%d", &n);

    int arr[n];

    for (int i = 0; i < n; i++)
        scanf("%d", &arr[i]);

    // Sort in ascending order
    qsort(arr, n, sizeof(int), compare);

    long long sum = 0;

    // Greedy calculation
    for (int i = 0; i < n; i++)
    {
        sum += (long long)arr[i] * i;
    }

    printf("%lld", sum);

    return 0;
}
```
